SKILLS

Frontend: HTML, CSS, Bootstrap, JavaScript, React.js
Backend: Express, Node.js
Databases: SQLite, MongoDB
Operating Systems: Linux, Windows Server,
Virtualization Platforms: VMware ESXi, Microsoft Hyper-V

PROJECTS

Codehero (<https://leet-code-clone-frontend.vercel.app>)

CodeHero is a platform where users can register and login to access a collection of coding problems. Once the user clicks on the “Solve Problem” button, they will be navigated to a web-based code IDE where they can write and test their code. When the user clicks on the “Run” button, they will receive feedback in the form of test cases to help them improve their solutions.

The dashboard of CodeHero features several coding problems that users can choose from, sorted by difficulty level or topic. Users can select the problem they want to work on and start coding immediately in the web-based code IDE. CodeHero offers a simple and intuitive interface that allows users to focus on their coding skills without worrying about setup or installation.

Overall, CodeHero provides a great resource for users who want to improve their coding skills by practicing real-world coding problems in a web-based code IDE.

Technologies used: MERN Stack

Todos Application (todotracker.ccbp.tech)

Developed persistent todo application with CRUD operations to track list of tasks

- Displayed list of todos with HTML list elements, styled todo list using CSS, Bootstrap
- Implemented todo crud operations by using JavaScript event listeners and updated UI dynamically by using JavaScript DOM operations.
- Used Arrays, Objects and their methods during todolist CRUD Operations, Persisted todo list state on page reloads using local storage methods. **Technologies used:** HTML, CSS, JS, Bootstrap

TypingApplication (<https://typing-web-app-red.vercel.app/>)

Developed persistent typing application to track typing speed

Technologies used: React JS
